Bhagalpur, India

Education

Indian Institute of Information Technology Bhagalpur *Aug 2024 – Present*

Bachelor of Technology in Electronics and Communication Engineering

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Probability & Statistics

Technical Skills

- **Programming Languages:** Python, C, C++
- **Libraries & Frameworks:** PyTorch, Pandas, NumPy, Scikit-learn, NLTK
- **Databases:** MySQL
- **Tools:** Git, GitHub, Jupyter Notebook, Google Colab
- **Concepts:** Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Data Cleaning, Feature Engineering, Model Evaluation, Cross-Validation

Projects

Kinship Verification from Face Images

Tech Stack: Python, PyTorch, facenet-pytorch, Pandas, NumPy

- Built a Siamese network to predict whether two people in face photographs are blood relatives, using a face-recognition-pretrained (VGGFace2) CNN backbone to extract identity-relevant embeddings.
- Designed the full data pipeline from scratch: parsed family-relationship labels, generated cross-family negative pairs, and built a balanced 260K-pair training set from raw family photo folders.
- Diagnosed and fixed a failing baseline (ImageNet-pretrained backbone, $\sim$40% accuracy) by switching to a face-pretrained encoder and using two-phase transfer learning (frozen warm-up, then full fine-tuning), reaching 98%+ accuracy and 0.99 validation AUC-ROC.
- Optimized training with an embedding-caching technique that cut CPU training time from hours to minutes, and delivered an end-to-end inference pipeline producing ranked probability predictions on unseen test pairs.

House Price Prediction

Tech Stack: Python, Pandas, NumPy, Scikit-learn

Live Demo

- Developed a machine learning model to predict Bangalore house prices using regression techniques.
- Performed data preprocessing, missing value handling, outlier removal, and feature engineering.
- Compared Linear Regression, Ridge Regression, and Lasso Regression models.
- Evaluated model performance using the R^2 score and cross-validation.

Spam Detection using NLP

Tech Stack: Python, NLTK, Scikit-learn

- Developed a spam classification model using an SMS dataset.
- Applied tokenization, stop-word removal, and TF-IDF vectorization.
- Trained and compared Naive Bayes and Logistic Regression classifiers.
- Selected the best-performing model using evaluation metrics.

Achievements

- Solved 500+ DSA problems across LeetCode, CodeChef, Codeforces, and GeeksforGeeks.
- Participated in 32+ competitive programming contests.
- Achieved a LeetCode Contest Rating of 1395 (Maximum: 1416).
- Achieved a CodeChef Rating of 1179 (Division 4).
